Visual Studio Keypad is the default keyboard, you cannot change it. But you can manually use the numeric keyboard to input characters. If you look at the regular keyboard, there is a key on the top left that moves from right to left, and another on the top right that moves from left to right. The arrow keys on the top work like that. In the numeric keyboard, the up arrow on the top is on the left and the down arrow on the top is on the right. You can set which keyboard you want to use by clicking the keyboard icon on the bottom toolbar. B-Space and Enter are used to close a form. B-Space is used in "enter" mode and Enter is used in "space" mode. For the formula and cell editor, you can use arrow keys or Tab to move between lines and shift+enter to move into the next line. When you use a formula to calculate, you need to use + or - to "enter" the next line. If you hit enter once for each line, you will get a difference for each line. Help for ASCIItran is located in the Help menu. This help menu can be accessed from "View" -> "Help". You can also use "F1" to get help for ASCIItran.Implant-associated lymphoma. About the ASCII: The ASCII is a code used to translate character sets from one alphabet to the one defined by the International Telecommunications Union. ASCIItran allows you to convert characters from several alphabets to the ASCII one. To do so you need to add the alphabet's Character set into the list, and specify the Start and End characters of the test. In order to test a character (the one in column A) simply follow the sample below. The General Alphabet: A, B, C, D, E,..., Z, a, b, c, d, e,..., z. The Roman Alphabet: I, V, X, C, L, D, M, C, N, P, S, G, X,... C, F, K, G, P
