Convert long-formatted names into short, catchy names. Simple rename tool with a clean and intuitive UI, based on a common window. It's ready to convert all your TV series in seconds. It's available as a free, stand-alone software and doesn't require Java. It's compatible with Windows XP, Vista, 7, 8, 10. The full path of the current file is displayed, along with the simplified version suggested. Support for different shows at the same time, with customized renaming rules. It's free, and has no time limit on the number of conversions. Before renaming, you can configure the renaming rules in order to automate the process. Automatically connects to the Internet via a proxy configuration. You can modify the proxy data (host name, port and user authentication data) and disable auto-checking for updates. Moreover, you can modify the naming rules to customise the conversion. Renaming files and transferring them

to a new directory is automatic and simple. Evaluation and conclusion: In our tests, it didn't consume too much system resources. It doesn't crash or hang, and no error messages are displayed. TVRenamer works with all files regardless of the format (AVI, MPEG, MPEG-2, VOB, AVI and FLV) and file type (video, audio, subtitles, text, vector and image). It's a simple tool, but it can be easily used to re-organize your TV series collections. The only limitation is that it doesn't support the latest Java edition, but that doesn't mean that you can't use it with previous versions. The available renaming and transferring options are very useful. We also like the intuitive UI and how quickly it works. • Organize your own series collections • Rename TV shows by your own rules • Automatically connect to the Internet via a proxy • Create flexible default rules to start with • Organize files by adding and organizing files, with auto-renaming • Program interface is not complicated • It can re-organize, rename and relocate files automatically without crashing your PC or causing system errors • User-friendly • Simple and fast • Java based • No need to install software • Supports all major media formats • Supports Windows XP and newer • Supports non-English languages, even for German and French TV series FreeAutoTune allows you to tune your audio files by means of an adjustable equalizer function, using the standard Windows mixer as well as from the command line or as a batch file. The equalizer adjusts the current audio track in three ways. 1. The volume of the audio track can be modified in five step increments. 2.

The bass, mid and treble frequencies can be adjusted individually. 3. Equalization presets are stored and can be used as an additional way to adjust the audio track. 4. The audio level of the audio track can be adjusted in three step increments. Evaluation and conclusion It was fairly easy to configure, with an intuitive user interface. There is a unique feature that lets you auto-adjust the equalizer and apply it to any audio file for free. You can adjust the gain in a range from 0 to 1.000, with a default setting of 0.500. The equalizer also provides an auto-adjust function, which lets you leave the work to the program. If the file is not available or the program is not correctly installed, FreeAutoTune can automatically rescan the file. The program works fine and does not crash. There is a Help menu that you can open with a double-click on the tray icon. Description: • Optimize your audio files with an adjustable equalizer • Adjust the audio track volume, frequencies and audio level • Store and adjust audio equalization presets • Auto-adjust the equalizer for any audio file • Allow the

program to auto-adjust the equalizer for you • Adjust the volume of audio files up to 1.000 • Auto-adjust the equalizer of audio files for you • Adjust the bass, mid and treble frequencies for all

What's New In?

TVRenamer is an application that enables you to quickly change long-formatted TV series names into simpler ones, by stripping off all unnecessary data. These long names are usually the standard when downloading movie content from torrents or other sources. This app can basically reorganize your collection, in case you want to prepare the TV series for DVD burning, for example. Java-based tool with a clear-cut UI As long as you have Java installed on your computer, you don't need to set up anything else. This means that you can drop the.exe file anywhere on the disk or a USB flash drive to directly launch it on any PC with Java. It doesn't modify Windows registry settings. The user-friendly interface is based on a common window

which lets you add as many video files as you want via drag-and-drop. It shows the full path of the current file and simplified version suggested. Get TV series info and configure naming rules Worth noting is that TVRenamer automatically connects to the Internet via a custom proxy configuration, in order to retrieve TV show details. It can rename different shows at the same time. Before instructing the tool to move the files to a new directory on the disk or to keep them where they are, you can customize the naming rules by specifying a season prefix and rename format by mixing and matching the available tokens, such as show name, season or episode number (with or without leading zeros). Moreover, you can modify the proxy host name, port and user authentication data, as well as disable the program from auto-checking for updates at startup. The renaming and optional file transfer are triggered with the click of a button. Evaluation and conclusion It was light on system resources consumption in our tests and didn't hang, crash or prompt error messages.

Thanks to its intuitive UI and options, TVRenamer can be easily used by anyone who wants to re-organize their TV series collections by renaming the files. However, it didn't work with the latest Java edition in our evaluation. What's new in 1.0 Added search for multiple series. Added Series info: Name, Year, IMDB Rating, Episodes. Added series search: Search for multiple series with real names and real rating, movie ratings, genres, IMDB category, etc. Added renaming options: Season, Season+Number, Series+Title (with/without number) Added RENAME without files transfer. Added auto-checking for updates at startup Added translation from Russian. Added Spanish and Catalan language. Fixed support for Java 7 Update 71. Improved supported file formats. Improved Java compliance. Improved help system. Improved user interface. Removed Beta-tag. TVRenamer is an application that
